An Employee-Owned Company

We believe
expertise drives
innovation, and
extraordinary
service propels
client success.

Comprehensive Energy Solutions

Sain Engineering Associates, Inc. (SEA) is a widely recognized global leader in energy engineering for federal programs with unprecedented success of the Resource Efficiency Management (REM) program, which has resulted in enhanced sustainability and increased resiliency for military installations and federal agencies throughout the globe.

Today, SEA continues its mission with the Federal Government while expanding services into healthcare, education, commercial and manufacturing industries by providing a portfolio of comprehensive energy solutions.

Located in Birmingham, Alabama, SEA is a small, employee-owned business that has achieved world-class energy excellence for its clients for more than 35 years.

Award Winning Credentialed Professionals

Through SEA's energy consulting practices, our cross functional team of professional engineers and licensed architects evaluate infrastructure reliability for critical facility requirements.

Acting on behalf of the owner, our approach ensures facilities are operating at peak performance, whether it's a newly constructed building or aging infrastructure.

Reputable Partners

We create lasting, impactful energy solutions across the globe. We achieve this by combining in-depth knowledge, extraordinary services and holistic strategies.

By using exact technologies and proven methods, we propel positive outcomes in each of our partnerships.

We take pride in our work. We take care of our clients.

We are the catalyst for change.

Trusted Industry Expertise

For us, it's about earning the trust of the facility owner and their team. It's about sharing our expertise so that each building we leave is operating at maximum efficiency despite various conditions.

It's why we rapidly respond to each client's needs, provide seamless collaboration and ensure your team is well prepared for ongoing operations.

Nothing gives us greater satisfaction than knowing we have solved the building's challenges while implementing cost-effective energy solutions.

Client Commitment

Our commitment to our clients is what distinguishes us from our competitors.

Our attention to detail, assurance to quality, willingness to collaborate across multiple teams, tenacity for hitting schedules and timelines and overall approach for how we communicate with our clients are the characteristics that turn so many of our current engagements into long-term partnerships.

Client Review

"The value the SEA team brought to our project was undeniable. SEA integrated seamlessly with our staff, the architects, engineers and contractors in order to achieve a successful, fully operational and accurate project. Their ability to work with everyone, troubleshoot and speak in ways that the entire team could understand while acting on the owner's behalf was invaluable."

Brian Matheson, PowerSouth Energy Cooperative

The ADTRAN logo is mounted on a brown brick building facade. The letters are large, white, and three-dimensional.

Client Review

"SEA stands above the rest. This is an amazing team to work with. No other engineering firm has ever compared to what SEA has been able to do for our facilities. This was proven when ASHRAE honored their work with the Technology and Innovation Award and featured it as the cover story on the ASHRAE September 2020 Journal. SEA's results are second to none."

Kelley Whalen, Facilities Supervisor, ADTRAN

Client Review

"The REM support to the 99th is fantastic. The team is working on very complex issues and providing us with technically sound recommendations. Most importantly, they are looking forward and seeking opportunities to improve operations. SEA REMs are highly valued professionals who are fully integrated into our team providing the technical knowledge and support our staff simply doesn't have."

*Jeffrey M. Hrzic, CIV Environmental Division Chief,
RSC099, ARIM/DPW*
